

# Softease® IdeasMap

A visual thinking tool to collect and organize ideas

Softease IdeasMap provides a structured means of organizing, understanding and remembering information in a fun and imaginative way. Designed for pupils from Kindergarten upwards, Softease IdeasMap is an aid to note taking, a time-saving way to capture ideas and a sure-fire way to improved educational achievement.

Incorporating the familiar Textease user-friendly functionality, this new ICT tool can be used within any curriculum subject. It is easy to produce detailed ideas maps, concept diagrams and flow charts that subconsciously consolidate learning and help idea retention.

Maps can be enhanced by adding notes to topics with text, pictures, photographs and even videos. They can also be exported to Textease and Softease Presenter.

# Softease® Timeline

A new dimension to sequencing events

Softease Timeline can be used to organize information and sequence events in a number of subjects at Elementary, Middle and High School levels. They have an obvious place in history to improve chronological understanding and to place events, people and changes into correct time periods but could also be used in many other curriculum subjects, e.g. in English Language Arts to plan linear writing such as a story or report; in Science to show different stages in an experiment, processes or relative distances; or in Geography to illustrate the development of geographic features.

Softease Timeline can be based on dates or any numerical scale and children are able to bring them to life by importing digital images, video and sound into their work. Timelines can also be enhanced by linking additional information pages to individual events providing the opportunity to record research and to add links to web pages.
